

Dur-A-Edge® Table Tops

EXCLUSIVELY
BY PLYMOLD

Indestructible

Our Dur-A-Edge® tables are created by injecting liquid polyurethane into a mold surrounding a high pressure laminate table top. As the polyurethane hardens, a continuous, moisture resistant seal is created around the table's edge. With its chemical formulation, the Dur-A-Edge® is the most resilient, long lasting table top in the industry.

Dur-A-Edge® Features

With a solid coloring throughout, Dur-A-Edge® tops do not chip or peel.

Ideal for any setting where a long wearing, classic table top is key. Dur-A-Edge® tables can be found in restaurants, cafeterias, schools and universities, offices and healthcare facilities.

Edge material contains up to 60% rapidly renewable materials (soybean / vegetable oil). It does not contain any Phthalates.

Made in the U.S.A.

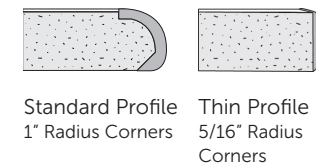

Keep your dining room looking new for years to come. Dur-A-Edge® Table Tops will not dent from normal use & abuse.
